DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art (Fig. 1, sections [0005]-[0007]) in view of Huang (US 2003/0177345).

As to claim 1, Fig. 1 admitted as prior art discloses processing a KBC having a BIOS flash utility (102), a KBC flash utility (104), and a BIOS and KCB data (106).

The admitted prior art does not update the KBC during a power-on self-test (POST) of the system. However, Fig. 3 of Huang teaches a method for updating the KBC during the power-on period. It has a method of checking to see if the KBC is updated (s304) and a method of updating the KBC when it is needed (s316). Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the KBC process of the admitted prior art to include the KCB updating process as taught by Huang so as to provide KCB updating in the BIOS in order to eliminate one system rebooting operations.

As to claim 2, Fig. 1 of the admitted prior art shows the building of a BIOS (102), BIOS data and flash utility (106), KBC data and flash utility (106), and combining the KBC into the BIOS (124).

As to claim 3, Fig. 1 of the admitted prior art shows flashing a BIOS ROM in the system by using the BIOS flash utility (114).

Art Unit: 2629

As to claim 4, Fig. 3 of Huang shows the checking of the KBC update (s304) and the updating of the KBC if needed (s318).

As to claim 5, Huang suggests a method of writing the updates to a memory location and then moving that data in order to update the KBC (paragraph 5, lines 7-13 of Huang). Therefore, in view of Huang's suggestion, it would be obvious to modify the system of admitted prior art, as modified by Huang, to have the process to shadow the KBC data into a memory address and flashing the memory address into the system during the updating processing.
